
INNOVATION & CREATIVITY Skills Workshop

Innovation and creativity are now core skills needed everywhere in your organization.

CLI has created a one-day workshop using the Foursight **Breakthrough Thinking Profile** as a basis for helping people understand their preferred approach to creativity and innovation. This active workshop offers learning activities to develop skills. At the end of the session, personal action plans transfer skills learned back to work.

Workshop Key Learning's and Outcomes:

Participants will discover their innovation style and their strengths and challenges.

Take a look at these workshop outcomes:

- Participants will complete the FourSight Breakthrough Thinking Profile online, which measures individual preferences. The Foursight Profile Report is a 20-page report that provides participants with a clear sense of their strengths and problem areas.
- The workshop provides immediate feedback on participants' innovation style strengths and challenges.
- Participants develop a best-in-class approach for managing the innovation process, from clarifying the project scope, to developing and implementing innovative project strategies.
- Participants will develop personal action plans to develop optimal performance on future project work. Contact us to develop a proposal today!
